

Think Dots

Title: Algebra Level 1

 <p>a, b, c and d each represent a different value.</p> <p>If $a = 2$, find b, c, and d.</p> $a + b = c$ $a - c = d$ $a + b = 5$	 <p>Explain the mathematical reasoning involved in solving card 1.</p>	 <p>Explain in words what the equation $2x + 4 = 10$ means.</p> <p>Solve the problem.</p>
 <p>Create an interesting word problem that is modeled by $3x - 6 = 24$</p>	 <p>Diagram how to solve $2x = 8$.</p>	 <p>Explain what changing the “3” in $3x = 9$ to a “2” does to the value of x. Why is this true?</p>

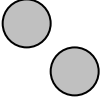

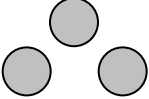

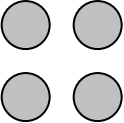

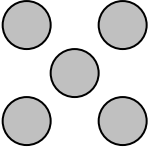

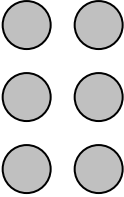

Think Dots

Title: Algebra Level 2

 <p>a, b, c and d each represent a different value.</p> <p>If $a = 1$, find b, c, and d.</p> $a + b = c$ $b - b = d$ $c + a = -a$	 <p>Explain the mathematical reasoning involved in solving card 1.</p>	 <p>Explain how a variable is used to solve word problem.</p>
 <p>Create an interesting word problem that is modeled by $2x + 12 = 4x + 2$. Solve the problem.</p>	 <p>Diagram how to solve $3x + 1 = 10$.</p>	 <p>Explain why $x=4$ in $2x = 8$, but $x=16$ in $\frac{1}{2}x = 8$.</p> <p>Why does this make sense?</p>

Think Dots

Title: Algebra Level 3

 <p>a, b, c and d each represent a different value.</p> <p>If $a = 4$, find b, c, and d.</p> $a + c = b$ $b - a = c$ $cd = -d$ $d + d = a$	 <p>Explain the mathematical reasoning involved in solving card 1.</p>	 <p>Explain how a variable in mathematics. Give examples.</p>
 <p>Create an interesting word problem that is modeled by.</p> $2x + 4 = 4x - 10.$ <p>Solve the problem.</p>	 <p>Diagram how to solve</p> $3x + 4 = x + 12.$	 <p>Given $ax = 15$, explain how x changes if a is large or a is small in value.</p>
